

CLAVO HUASCA EXTRACT

2 Fluid Ounces / 60 ml

Retail Price: \$21.95

In Peruvian herbal medicine, clavo huasca is widely regarded as an libido booster for women.^{*} It is an ingredient in two famous formulas for which are widely sold in the herbal markets and stores in Peru for sexual potency; one called *Siete raices* (Seven Roots) and the other is *Rompe Calzon* (Bust your Britches).^{*}

Raintree Nutrition's Clavo Huasca Concentrated Extract uses new and proprietary extraction methods to concentrate and preserve the active ingredients found in this amazing rainforest vine. It provides the equivalent of 500 mg of clavo huasca vine in 1 milliliter of extract (30 drops) and is rich in active and beneficial plant chemicals which occur naturally in this plant. For more complete information on this unique rainforest plant, please see the Raintree Nutrition website and the online [Tropical Plant Database](#).

Traditional Uses:^{*} as a female aphrodisiac for pre-menopausal women; for muscle pain and aches; as a digestive aid to calm the stomach, increase appetite, and expel intestinal gas; as a male aphrodisiac and for erectile function; as a general tonic (tones, balances, strengthens overall body functions)

Ingredients: Clavo huasca vine (*Tynanthus panurensis*) extracted in distilled water and 40% alcohol.

Suggested Use: Take 30-60 drops 1-2 times daily.

Contraindications: Not to be used during pregnancy or while breast-feeding.

Drug Interactions: None known.

Other Observations: Some women have reported becoming too sexually aggressive on clavo huasca with continued daily use. If this occurs reduce usage to 2-3 times weekly.

Synopsis of Published Research:^{*} This Raintree product has not been the subject of any clinical research. Available third-party documentation and clinical research on clavo huasca can be found at the Raintree website and on [PubMed](#). A partial listing of the published research on clavo huasca is shown below:

Antioxidant Actions:

Plaza, A., et al. "Phenylpropanoid glycosides from *Tynanthus panurensis*: characterization and LC-MS quantitative analysis." *J. Agric. Food Chem.* 2005 Apr; 53(8): 2853-8.

Synopsis of Traditional Uses:^{*} Available third-party documentation on the traditional uses of clavo huasca can be found at the Raintree website and a portion is provided below:

From: Dr. James Duke, 1997 *The Green Pharmacy*, Rodale Press, Inc.

"Clavo huasca (*Tynanthus panurensis*) is an aromatic vine that is often found climbing to the forest canopy in Amazonian Peru, where I lead my Rainforest Pharmacy Workshops. One traveler in my first Physician's Workshop, an acclaimed herbalist himself, says he has empirical evidence that tincture of clavohuasca, a rather pleasant and warming liqueur, sexually excites both the male and female of the human species—namely him and his wife."

From: Duke, James A and Vasquez, Rodolfo. 1994 *Amazonian Ethnobotanical Dictionary*. CRC Press, Inc.

"*Tynanthus panurensis* (Bur.) Sandw. Bignoniaceae. "Clavo huasca", "Inejkeu", "Clove vine".

The pieces of roots and stems are macerated in aguardiente to make a stimulant liqueur, good for rheumatism (RVM). Resin used for fevers (DAT). Some explorama visitors have used it, effectively, for toothache, being as effective as, and probably chemically similar to clove oil (JAD). Some visitors believe, others disbelieve, that the rays of the cross, steeped in aguardiente, are aphrodisiac, some for females,

some for males, some for both. We have no incontrovertible empirical evidence, one way or the other."

From Dr. Leslie Taylor, N. D. 2005 *The Healing Power of Rainforest Herbs*. Square One Publishers, Inc.

"Clavo huasca is also widely regarded as an aphrodisiac for both men and women in Peruvian herbal medicine today. It is an ingredient in two famous herbal formulas for impotency and frigidity which are sold widely in the herbal markets and stores in Peru as aphrodisiacs and for sexual potency. One is called *Siete Raices* ("seven roots") and the other is *Rompe Calzon* ("bust your britches"). In addition, this vine tincture is also employed for fever, aching muscles and arthritis pain in Peruvian herbal medicine. The fresh sap or resin from the root of the plant is used as a toothache remedy-containing a chemical called eugenol which acts as a topical pain-reliever. As an aphrodisiac, clavo huasca is traditionally prepared by macerating the vine bark and wood in alcohol, or most commonly, the local sugar cane rum called aguardiente. In Brazilian herbal medicine, the plant is called cipó cravo; it is considered an excellent remedy for dyspepsia, difficult digestion, and intestinal gas (when brewed as a water decoction) and an aphrodisiac (when macerated in alcohol into a tincture).

Clavo huasca is still widely employed as a natural aphrodisiac for both men and women in South America today. It's reported to be highly effective, especially for pre-menopausal women (but not as effective for libido loss after menopause). This use has caught on here in the U.S., and more clavo huasca products are now available in natural product stores. It is also showing up as an ingredient in various herbal libido formulas for men and women as well. For its aphrodisiac qualities, its best prepared in its time-honored traditional method: as an alcohol tincture."

This product is sold through health practitioners, retail stores, and [Raintree Nutrition](#).
